trait

Advanced Definition

noun

1. a distinguishing feature or characteristic, as of one's appearance, ability, personality, or nature.

   Although he was very wealthy, generosity was not one of his personality traits.
   An interesting trait of the hummingbird is its ability to fly backwards.

These are some examples of how the word or forms of the word are used:

1. Kindness, compassion, peace and goodwill are all important traits for a faithful Jewish practitioner.
2. Genes are short DNA segments that are responsible for individual traits in an organism. The genes that James added prevent flight muscles from forming in female mosquitoes.
3. I didn't ask, but I had to guess that this man had intentionally bred the two larger, golden colored dogs together, so the results would be the lovable puppies I was in the process of adoring. In making this choice, this man was doing something that past breeders and farmers had been doing for years—he had selected the specific traits he liked, and made sure they were passed down to the next generation. This may also be part of the reason the dogs were so willing to let me touch and play with them—they had been specifically bred to have a pleasant temperament.
4. They want to be recognized and appreciated for their individual traits, who they are, and are not. Grade six marks the true beginning of experimenting with which traits will be incorporated into their identity, and which will not. They will often say things simply to see what kind of response they will get.
5. So life can be hard for people with dyslexia. However, learning to cope with dyslexia can also equip people with the kinds of survival skills and personality traits that can help them to succeed later in life.
6. This is an example of natural selection. An organism that develops a trait that helps it survive in its environment will have a better chance of reproducing and passing that trait on to the next generation. As a consequence, organisms with this helpful trait will become more prominent while other organisms of the same species die out.
7. Everyone has traits: characteristics and qualities that make us who we are. We have physical traits, like brown hair, blue eyes, long legs, freckles and funny looking toes. We also have personality, or character traits. Those include things like being great at telling jokes, compassion, intelligence, warmth, creativity.
